

## **ENDO 2016**

Friday, April 1, 2016

**Women's Health** (9 a.m. EDT): The Society will release its new Scientific Statement on compounded bioidentical hormones used to treat menopausal symptoms and other hormone conditions during this event. The press conference also will feature research to engineer new implanted devices to treat infertility, investigate the link between polycystic ovary syndrome (PCOS) and asthma, and develop a new method to predict post-menopausal bone loss.

**Endocrine-disrupting Chemicals** (10 a.m. EDT): This session will examine the effect of endocrine-disrupting chemical exposure on the microbiome, attention deficit disorders in children, male fertility, and developing breast tissue and potential cancer risk.

Saturday, April 2

**Diabetes** (9 a.m. EDT): The press conference will delve into how the diabetes drug liraglutide affects the brain and appetite, the best breakfast proteins for people with diabetes, and the connection between thyroid disorders and Type 2 diabetes.

**Obesity** (11 a.m. EDT): Researchers will discuss research comparing the Paleolithic diet to a low-fat diet, early signs of childhood obesity in infants, and patterns of weight loss and gain in a large population study.

Sunday, April 3

**Bone Health** (9:30 a.m. EDT): Researchers will share new insights on the effects of attention-deficit hyperactivity disorder medications and anti-depressants on bone health.
